CONGENITAL EAR DEFORMITIES
Other Conditions
Diffuse fibrous dysplasia of the skull base. There has been wide resection on the left, evidently an open cavity mastoidectomy, in an effort to recover hearing.
Same case, showing partial aeration of the deep EAC and masses of retained debris in the surgical site.
Fibrous dysplasia of the Rt nasal passage and temporal bone.
Same case, section through the sphenoid sinus demonstrating further extension into the temporal bone.
Klippel-Feil Syndrome. Fusion of the cervical vertebrae, short webbed neck. May have other associated deformities including inner ear.
